DESIGNED FOR ROTARY & SCROLL COMPRESSOR CONTROL

7 – 20A 200V Single Phase Input
14 – 75A 400V Three Phase Input

R290
Natural Refrigerant Ready

SPECIFICALLY DESIGNED FOR MACHINE BUILDERS TO OPTIMISE THE PERFORMANCE OF ROTARY AND SCROLL COMPRESSORS

Motor Technology & Safety

Accurate starting torque to ensure hermetic BLDC / PM Rotary and Scroll compressors start smoothly under all operating conditions.

Configurable start-up profile with independent acceleration ramps to precisely match the compressor manufacturers requirements.

Integrated high-performance EMC (Electro-Magnetic Compatibility) filters provide C2 compliance for conducted emissions and C1 compliance with optional external filter.

Save Energy

Improved system performance (COP) by modulating the compressor speed to match the cooling demand.

Suction pressure set-point control carried out by the application controller or directly in the drive. This matches the speed of the compressor to the system demand reducing the error around the set-point (under/over shoot) in the evaporator, saves 4% energy per 1-degree Kelvin difference.

Rotary & Scroll compressors provide a wide operating range, typically 20 rps (1200 rpm) to 120 rps (7200 rpm). This means that the compressor can operate at very low speed, when cooling demand is low, resulting in fewer compressor start stops.

Reduced Maintenance Costs

Extended speed range means less stop-starts, providing longer compressor life.

Soft starting reduces the mechanical stress at compressor start up, which extends compressor life.

Through panel mounting allows the drive power electronics to be cooled by the chilled air.

Allowing OEM's to select the smallest electrical panel size, for the control electronics, while safely removing the heat generated by the drive, and maintaining IP rating.

Specifications are identical to the standard Coolvert except the heatsink is replaced with a flat aluminium coldplate. This allows the Coolvert to be fixed to a device containing its own heat exchanger which then dissipates the heat from the drive.
